(57) Abstract :

The present invention relates to a drill bit holding apparatus, comprising a main body 1 in association with the apparatus, the main body 1 is connected to at least one suction pad 2 at each end in order to hold the apparatus on surface of walls, a sliding rail 3 is installed to provide a movement to multiple drill guiders, plurality of drill guiders 4 are movable on the sliding rail in a collinear manner wherein said guiders are used to rigidly hold said drill bits to ensure stability while drilling, the surface level measurement unit 5 configured to determine levelling of drilling positions to bore the holes in a collinear alignment on a surface of walls.
