(57) Abstract :

The present invention relates to a fluent dispenser apparatus, comprises an evacuable container 1 with first and second portion, wherein the container 1 filled with a fluent that is dispense through a opening present at the first portion, a first roller positioned at the second portion, wherein the first roller is rotated in a user-defined direction by means of a handle, a second roller 4 interconnected with the first roller 3 via a metallic wire 5, wherein the second roller 4 rotates upon rotation of the first roller 3, a rack and pinion arrangement coupled with the second roller, wherein the pinion is coupled with the second roller and rotates along with it, which results in translation of the pinion on the rack, at least one plunger 8 connected with pinion 6 that moves with the pinion 6 to apply a force on the fluent in order to dispense it.
