(57) Abstract :

The present invention relates to an adjustable spectacle temple apparatus, comprising a spectacle having a telescopic temple 4 designed in a manner to extend up to a predefined length according to a user requirement, a spring 1 attached with a first end of the temple 4, wherein the spring 1 allows the temple 4 to retract/extend up to predefined length from its resting position, a pair of elongated locker arms 2 mounted on the temple 4 via locking ports for maintaining the extended/retracted length of the temple 4, a holder 6 having a pair of holes 7 mounted on the spectacle, wherein the locker arms 2 attaches with the holes 7 upon compression of the spring 1 to assist in the retraction/extension of temple 4 and a hinge 5 for attaching the temple 4 to the holder 6 to fold the arms 2 up to a predefined angle.
