(57) Abstract :

A spillage prevention device comprising of a container 1 in association with the device having an insulated handle 2 for storing a fluid, wherein the container 1 is placed over an induction source for heating the fluid, a sensor 3 mapped on a first end of the handle 2 for detecting level of the fluid upon heating, a control unit configured with the sensor 3 for matching the level with a threshold value, wherein the control unit generates a command signal upon exceeding of the level to actuate a motor 4 and a drive assembly 5 having a steering unit 6 connected with the motor 4 embodied in the container 1 for steering the fluid in order to prevent spillage of the fluid from the container 1 after boiling of the fluid.
