(57) Abstract :

The present invention relates to a pipe bending device, comprising a rod 1 having a curved plate 2 for securing a pipe on the plate 2, wherein the rod 1 rotates at a predefined angle in order to bend the pipe, two holders 3 equipped with ball bearings 4 connected at ends of the rod 1 for holding the pipe through the plate 2 in order to bend the pipe upon exertion of pressure on the pipe, a pair of reversible motors 7 installed in the device for actuating the rod 1 to rotate in the angle for performing bending of the pipes upon actuation of the motors 7 and a handle 6 attached with the rod 1 via two nuts 5 for providing grip to a user for holding the device.
