(57) Abstract :

The present invention relates to an oral care apparatus, comprising an elongated tubular handle 1 having grooves on a surface of the handle 1 designed for providing grip to a user, two elements attached to the handle 1 with a bristled head 2 at an upper end of the handle 1 and an arcuated head 3 at a lower end of the handle 1 for enabling oral cleaning to the user and a telescopic enclosure 4 for covering the tubular handle 1, wherein the enclosure 4 is rotated in a clockwise and anticlockwise direction for utilizing and enclosing the bristled 2 or arcuated 3 heads respectively to maintain oral hygiene while preventing accumulation of impurities.
