(57) Abstract :

An automatic golf stick recommendation system, comprising a database unit associated with the system for storing geographical area and location of a hole on a golf course, a GPS receiver in connection with a ball for determining real time location of the ball, a controller interfaced with the receiver and database unit, wherein the controller upon analyzing position of the ball relative to the hole generates a command signal for determining a golf stick, and a movable body having an opening on an upper portion of the body, comprising a control panel 1 installed on the body to display the determined golf stick, wherein the panel 1 enables the user to confirm the requirement of the determined golf stick and a rotating plate 2 in connection with the control panel that moves via a motor actuated upon receiving another command signal from the controller in response to the user's confirmation.
