(57) Abstract :

The present invention relates to a container opening apparatus comprising of a bar 1 equipped with a pair of sliding units 2, wherein the units 2 allows a user to mount the bar 1 between the peripheral edge of a container 3, a spring 4 incorporated with the bar 1, wherein a first end of the spring 4 is engaged with a pull tab 5 of the container 3 in such a manner that it allows user to hold the first end, a fork type arrangement 6 welded to a second end of the spring 4 in order to apply pressure on a closure 7 of the container by permitting the pull tab 5 to be lifted in perpendicular direction to remove the closure 7 upon pulling the first end.
