(57) Abstract :

The present invention relates to a wrapper sealing device, comprising of an inverted pentagonal holder 1 associated with the device, wherein a node of the holder 1 is pivoted to an elongated handle 2 enclosing a battery and a switch for allowing a user to clutch the device with the help of electrical energy, a wheel 3 axled on a face side of the holder 1 for being rolled over the wrapper, a spiral coil 4 circumferentially attached inside the wheel 3 for generating heat sufficient to seal the wrapper upon being traversed by the wheel 3, a pair of insulators 5 linking the wheel 3 to the side, wherein the pair prevent spreading off of the heat; and a round cutter 6 positioned on the right side of the wheel 3 spindled adjacent to the wheel 3 for removing redundant portions of the wrapper while being sealed.
