(57) Abstract :

The present invention relates to a side mirror securing apparatus for vehicle comprises a casing 1 having a mirror 2 at its inner side and a rubber coating at its outside surface, wherein mirror 2 helps a driver to see areas present behind and at sides of a vehicle, a ball head 3 interconnected between the vehicle's frame and casing 1 for preventing damage to the casing 1 by allowing it to rotate freely when an external object collides with the casing 1 and at least two springs 4 interlinked casing 1 for allowing the casing 1 to regain its original position after meeting with the collision in order to prevent disorientation of the casing 1.
