(57) Abstract :

A bicycle back rack apparatus comprises of a bicycle carrier 1 having a lever 2 for keeping object(s) on the bicycle's rack and the lever 2 prevents from slipping or falling of the object(s), a horizontal rod 3 for lifting the lever vertically upward, a primary end of the horizontal rod 3 attached with the lever 2 and secondary end is wrapped over a roller 4 that promotes movement of the horizontal rod 3, a vertical rod in connection with the horizontal rod 3 through the roller 4, a paddle 9 for pulling down the vertical rod 5 in order to lift up/retract the lever 2, a ring 10 for locking the vertical rod 5 in order to hold the upward lifting of the lever 2.
