(57) Abstract :

The present invention relates to an adjustable bottle cleaning apparatus, comprising a telescopic rod 1 with a cleaning tool at a lower end, wherein multiple holes are perforated on the rod 1 for adjusting length of the rod 1 depending on size of a container, a clamping component 2 positioned on an upper end of the rod 1 for securing a container's opening so as to fit on the opening circumferentially and a handle 3 associated with the clamping component 2 for rotating the telescopic rod 1 via a bearing positioned at center of the component 2 in order to clean inner surface of the container.
