(57) Abstract :

The present invention relates to a corn threshing device comprising a handle 7 associated with the device for holding a corn 3, wherein the handle 7 consists of a battery, a charging port 9 and a switch 8 that is fitted with a pointed trident 4 for holding the corn 3 stiffly, a motor embedded inside the handle 7 linked with the trident 4 in order to provide a rotational motion to the corn 3, a hollow tube 1 attached to the handle 7 via a sliding shaft 5 for allowing to and fro movement to the handle 7 to move it into the container 6, wherein the hollow tube 1 is fabricated with plurality of teeth 2 to thresh seeds from the corn 3; and a detachable container 6 attached to the hollow tube 1 to collect the threshed seeds, wherein the container 6 is attached to a lower end of the tube 1.
