(57) Abstract :

The present invention relates to smart cloth drying device comprising of an electric blower 1 for discharging high amount of hot air up to 40 degree Celsius temperature, a connecting hollow pipe 2 installed with the blower 1 to act as a medium for flowing hot air to other end, at least one hanger 3 fitted to other end of said pipe 2 to allow inflow of hot air and discharge it through plurality of nozzles embedded at its bottom portion inside a cover 4 attached to it containing clothes, a hygrometer 5 associated with the hanger 3 to determine moisture content and a microcontroller to take data from sensor 4 and govern the blower 1 accordingly.
