(57) Abstract :

The present invention relates to a food heating device, comprising at least two hollow rollers having holes on outer portion and a heating rod on inner portion installed in the device in a manner to reheat flat edibles (such as bread, chapati, etc.), wherein an upper roller 1 is vertically movable via a primary handle and a lower roller 2 is fixed, a chamber 3 affixed in the device for storing a fluid (such as butter), wherein the fluid flows to the rollers (1, 2) through a tube connecting the chamber 3 with the rollers (1, 2) for spreading the fluid on the edibles via the holes present on the outer portion and a gearwheel 4 connected with the rollers (1, 2) for rotating and controlling speed of the rollers (1, 2) via a secondary handle for providing uniform heating to the edibles.
