(57) Abstract:

A juice extraction apparatus comprise of a detachable container 1 (i.e. cylindrical shaped) correlate with the apparatus for storing a sliced fruit that is build of a non-corrosive material, multiple protruding hole engraved inside the container1 for holding the fruit in a stable position wherein the hole size is electively in range from 2 -7mm., at least one parabolic cone shaped plunger 3 having a finger grip area to provide grip to a user around plunger 3, wherein the user rotates, exerts pressure on the plunger 3, multiple sharp ridges 4 fabricated over the cone that extracts juice, juice vesicles from the fruit after rotation, wherein the sacs are pressed by the outward protruding holes 2 with spiky edges thereafter exertion of pressure.
