(57) Abstract :

A metal bender apparatus comprise of at least one bolt rod1 linked with apparatus having two ends where rod 1 is made up of material such as steel and having a spiral design around it of grip, a spring clamp 2 seated on the upper end of the rod 1 for holding a metal piece/rod/sheet, a rotatable member 3 fixed on under the clamp 2 having a handle 6, where the handle6 provides grip to the user while rotating the rotatable member 3, at least one ball bearing assembly 4 arranged on the member for bending the piece of rotation provided by the user, where the arrangement reduces friction for smooth bending of the piece and a washer-nut assembly 5 arranged on lower end of the rod 1 for easy relocation from one work site to another.
