(57) Abstract :

The present invention relates to a retractable two-wheeler indicator apparatus comprising of two toggle type switches 1 mounted on a handle of the two-wheeler vehicle which is operated by the user, for actuating left and right indicators of the vehicle, a set of linkages 3 mechanically coupled with the switch 1 to transmit and manage force applied by the user on the switch 1, a pivot joint 2 housed on the linkage 3 to convert forward motion of said switch into backward motion, four indicator housing 4 installed with the blinkers mounted on front and rear portion of the vehicle, further connected to the linkages 3 to provide to and fro movement of the indicator housing 4 for retracting it, in and out from the vehicle thus avoiding damage to the blinkers, a circuit board in association of the with the switch 1 to complete circuit for actuating blinkers inside the housing 4.
