(57) Abstract :

An adjustable luggage transporting device comprising a rectangular frame 1 includes a first and second set of columns 2 that adjusts as per the user's height, a camera 4 for capturing images of user, a telescopic rod 5 configured with a caterpillar wheel 6 for assisting the frame 1 over the ground surface, a wearable jacket 7 attached at one end of frame 1 and equipped over upper body portion of user, rain 8 and light 9 sensor integrated with the jacket 7 for measuring presence of rain or sunlight, a pair of rollers 10 wrapped with water proof covers 11 for providing covers to frame 1 and user in rain, an inflating unit 12 for inflating an integrated bag to prevent frame 1 from drowning in water surface, a shock absorber 13 for preventing goods from damage and wheel over undulation, telescopic shafts 14 for placing in parked position.
