(57) Abstract :

The present invention relates to an automatic casket grounding device that consists of a frame 1 fitted with multiple wheels 2 oriented in such a manner that the frame 1 positions over a dig where casket 3 is to be buried, a motorized spade 5 is fitted underneath the frame 1 and connected with the module 4, while microcontroller actuates the spade 5 to re-configure the dig in accordance with the dimensions of the casket 3, tri pod stand 6 mounted over the frame 1 in such a manner that the legs 7 of the stand 6 are fabricated with telescopic rods to alter the height with respect to ground surface, a pair of pulleys 8 integrated with the stand 6 through telescopic shafts 9 and attached with hooks 10 to carry the casket 3 in balanced manner and display on a screen 11.
