2)Malika Arora
3)Dr. Sajjan Singh

(57) Abstract :

The present invention relates to an automatic food processing device comprising of a body 1 having two sections 2,3, wherein the first section 2 contains food contents, a sliding rack 4 to strain excess of water from the contents after cooking, plurality of nozzles 6 for dispensing the strained water and providing extra water to the second section 3, a heating unit for raising temperature of the body up to a desired cooking temperature, an anti-fog camera 8 for detecting food processing parameters, wherein the microcontroller generates a command to a motor, a telescopic gripper 9 for pressing the food contents in order to analyse cooked food, a strain gauge sensor 11 for sensing pressure level of the food contents, wherein the microcontroller generates a command to the heating unit to auto cut-off upon matching the pressure level with the threshold value.
