(57) Abstract :

The present invention relates to an automatic fruit filling device comprising a body 1 having a first end 2 and second end 3 such that the first end 2 is configured with a housing 4 for accommodating a fruit that is to be filled such that a user is required to position the fruit within the housing 4, a ripeness level detection sensor fabricated within the body 1 for determining ripeness level of the fruit, a touch interactive screen 5 arranged on the body 1 for enabling a user to input user-desired diameter of drilling and ingredients to be filled within the fruit, multiple concentrically arranged telescopic rods 6 arranged at the second end 3 for drilling the fruit for crafting a cavity where ingredients are to be filled, multiple chambers 7 coupled with multiple conduits 8 for storing and transferring different ingredients and fillings within drilled cavity of the fruit.
