(57) Abstract :

The present invention relates to a coconut processing device, comprising of a body 1 possessing at least three chambers 2,3,4 wherein the first chamber 2 comprises of at least three portions 5,6,7 to aid in processing of a coconut fruit, a peeling unit 8 actuates to peel the coconut fruit upon detection of first parameter, a dehusking unit 9 actuates to dehusk the coconut fruit upon detection of second parameter, a grating unit 10 in association with primary Infrared sensor (IR) wherein the grating unit 10 actuates to grate the coconut fruit upon receiving instruction from user, a second chamber 3 to store peeled, dehusked and grated coconuts, a motorized striker 11 in association with a secondary Infrared sensor to break open the coconut fruit into various pieces and for extracting liquid, a collecting unit 12 connected with a conveyer belt 13 in allows for distribution of the coconut liquid.
