(57) Abstract :

The present invention relates to a device for collecting clipped hair, comprising, a wearable body 1 having a first and second portions 2, 4, the first portion 2 wraps around neck of a user and the second portion 4 covers the body 1 of the user, a magnetic strip 3 for attracting clipped hair of the user, plurality of IR sensors 7 functionally couple for real-time monitoring of movement of the neck, the controller on receiving the monitored signals generates a command to cease working of the magnetic strip 3 on the first portion 2 in case movement of the neck exceeds a threshold value, a sheet 5 for collecting clipped hair of the user, the actuator 6 is activated in case the magnetic strip 3 cease to work, and an inflating unit 8 for supporting head of the user, the inflating unit 8 is activated via the microcontroller.
