(57) Abstract :

An elongated body 1 having a first and second portion 2,3, plurality of chambers 4 fabricated within the body 1 for storing different ear cleaning liquids, a nozzle 5 in continuation with a telescopic hose 6 for dispersing the liquids, an AI module 7 integrated with a controller for scanning conditions of user's ear, wherein the controller on processing the images generates a command to activate an actuator for dispensing the liquid, a control panel in association with the module 7 for providing access to a user to input commands for extending/retracting the hose 6, a rotatable telescopically operated bud 8 embedded within the body 1 for removing cerumen accumulated within the ear canal, a bulbous chamber 9 for collecting the cerumen the liquid from the ear, a sliding plunger 10 associated with the second portion 2, wherein the plunger 10 reciprocates to create a pressure for dispensing the liquids.
