Filing Date	:NA	

(57) Abstract :

An edible fats processing device, comprising a body 1 crafted with a first sensor 2 monitors glucose level and second sensor 3 monitors oxygen level of the user, a microcontroller generates a command in case the lactose tolerance concentration exceeds a threshold value, a display panel 4 for displaying the detected value and suggest amount of raw material to be utilized, a primary chamber 5 crafted with a peltier unit for storing the raw material, and regulates temperature, a temperature sensor for monitoring real time temperature of the raw material and surroundings, a secondary chamber 6 arranged with a stirrer 7 for receiving the cooled raw material, and stir the material to obtain a homogeneous mixture of the material, a humidity sensor for monitoring moisture level, a tertiary chamber 8 integrated with a netted fabric 9, receives the homogeneous mixture in order to extract the edible fat.
