(57) Abstract :

A grooming device for animals, comprising a mat 1 associated with the device to provide a place for accommodating an animal, multiple retractable chambers 4 attached over mat 1 via multiple racks that are activated by microcontroller in accordance with position of animal's feet, a container 5 fabricated with multiple bristles 6 attached within chamber 4 via a motorized gear arrangement that is activated to rotate the container 5, a conduit 9 fabricated with multiple pores 7 attached at mat 1, an air blowing unit paired with conduit 9 and actuated by microcontroller to allow flow of hot air via the pores 7 and a communication module paired with the microcontroller to establish a wireless connection between the microcontroller and a user's computing unit to allow the user for entering time duration required for cleaning of the animal's feet.
