(57) Abstract :

The present invention relates to a multi-functional peripheral device, comprising a body 1, a sweat sensor 2 associated with the body 1, integrated with a microcontroller for detecting sweat of the user's palm wherein the microcontroller on sensing the sweat generates a command to actuates a motorized fan 3, plurality of pores 4 in combination with the fan 3 for providing ventilation to palm of the user, a massaging unit 5 provide massage to the palm of the user to provide comfort.
