Filing Date	:NA	

(57) Abstract :

The present invention relates to a smart protecting device comprising of a body 1 possessing inner layer 2 and outer layer 3 to provide protection against infections and against bite of predator(s), an Artificial Intelligence (AI) camera 6 takes images of surroundings and compares images with pre-fed parameters among others and actuates mechanisms needed for survival of wearer of body 1 in the surroundings, a PIR sensor in association with an air compressor 5 relays signals to a microcontroller to actuate the air compressor 5 to inflate the layers 2, 3 to prevent fall of wearer upon detection of less than optimum ground clearance, a straight railing 6 in combination with a round railing 7 for removal of parasites from the wearer, an extendable clip 8 helps in removal of parasites, a pair of ear buds 9 protects the ears from damage, plurality of sensors for determining vital parameters.
