(57) Abstract :

A smart selfie taking device, comprising of a sliding chamber 1 configured on a computing unit 2, a L-shaped telescopic rod 3 that extends/retracts on sliding the chamber 1, a display unit 4 in communication with a camera module for unveiling focal length of the camera module, a microcontroller receives the detected focal length and generates a command in case the detected focal length exceeds/recedes a threshold value, a motor gets actuated to adjust the rod 3 according to the focal length, an Artificial intelligence (AI) camera 5 installed on the rod 3 for real time monitoring the user, a voice recognition module providing an access to a user to input commands regarding the capturing of the images.
