(57) Abstract :

The present invention relates to a system and method for treating psychological disorders comprising, an input module associated with the system for fetching credentials from a user, an interaction module connected with the input module for asking queries to the input module and records reply statements from the user in response to the queries, a processor configured with the interaction module for evaluating the statements using the input module in order to determine emotional status of the user, wherein the processor transmits emotional status information to the input module, a recommendation module connected with the processor for assigning assignments to the module to determine sentimental status of the user by performing text based analysis based upon received responses from the input module, wherein the module is configured for suggesting a video call with therapists located in proximity to location of the user within a specified geographical area for providing consultation.
